Art Unit: 3753

The Office Action of January 20, 2010 is withdrawn.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 59-195565, of record.

Spring loaded valve seats 9 and 10 are movably disposed and are read as being pin valves. The ports of JP '565 are read as being coupled as recited in claims 5-7.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-7 are, in the alternative, rejected under 35 U.S.C. 103(a) as being unpatentable over JP '565.

Coupling the ports of the liquid chromatography valve of JP '565 to the system components recited in claims 5-7 is considered to be an obvious step in that such system components are old and well known in the art.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
